

Question and Answers N.1

Question 1: Clarification on Item 10 of Annex 4 (Commercial Response) – Scope of the 10-Repository Pilot

In Annex 4 (Commercial Response), Item 10 requires pricing for "Pilot and quality-policy translation – 10-repository pilot; reproduce and validate ESM quality policy".

To enable candidates to accurately size and price the onboarding, enablement, and configuration effort for this pilot phase, could the ESM please clarify:

- Technology stack / Languages: Which programming languages and build ecosystems will be represented within the 10 pilot repositories (e.g., the full core stack of Java/Maven, TypeScript/npm, and Python/PyPI - or only a subset thereof)?
- Stakeholders and Portfolios: Are the 10 pilot repositories expected to come from a single application portfolio / development team, or will multiple portfolios/teams participate in the pilot phase?

Answer 1: Please refer to the updated Commercial Response model attached.
